

# C-501 Klexall

## Universal Liquid Waste Solidifier

- Non—Toxic
- User Friendly
- Less Final Waste Volume
- Lower Burial Cost
- Lower Transportation Cost

**Klexall is a polymer enhanced hybrid spill absorption/solidification product. Klexall was developed for one of the largest logistics companies in the world, who desired a single product which would pick up and bond any type of liquid spill.**

Klexall was designed to absorb and bond all types of liquids from hydrocarbons, water based, acid and alkaline based spills in a one step, one product operation.

Klexall has been used to bond and immobilize over 2 million spills across the country with excellent results. Because of its effectiveness, Klexall reduces the amount of product necessary to solidify spills, which makes it to making Klexall very economical to use.

Less product means a smaller final waste form which results in more spill per container, less bulk waste to transport and overall reduced cost for burial.

Klexall is a non-toxic, environmentally safe, and user-friendly technology, which will provide excellent results each and every time.

### Solidified Liquid Waste
